

Final Project Proposal

Nature has always fascinated me, and observing seasonal changes brings me a sense of joy and curiosity. This inspiration guided my midterm project, where I created a cherry blossom themed webpage. For my final project, I would like to continue developing this idea by expanding the site and incorporating the new tools and techniques we learned in recent sessions.

My current project includes four pages that explore what a cherry blossom tree looks like across different seasons. The home page has a summer-inspired theme with warm colors in the navigation bar and a color-changing animation. The second page represents winter, using cooler tones and the same animation style. The third page, my personal favorite, focuses on springtime cherry blossoms, showcasing bright pink and green hues to reflect the beauty of the season. The final page is a gallery containing original nature images.

For my final project, I plan to add a fifth page featuring JavaScript and p5.js interactions or animations. I also want to enhance the existing pages by adding new visual elements or updated animations. Additionally, I hope to include interactive features such as flower-picking or cherry-picking elements, as well as subtle animations within the gallery page using p5.js and jquery.

My goal is to elevate the aesthetic and interactive quality of the project while staying true to the theme that inspired me from the beginning.
